IN THE ABSTRACT

The invention relates to a drink dispenser provided with a chamber with an opening for accommodating a container containing carbonated drink. The container is provided with an outlet closed by a shut-off valve and a tap head that during use is connected via a line to the outlet, which tap head has an operating member for opening and closing the line, ~~wherein the~~. The line has a relatively stiff line section with a first part and a second part that are in contact with one another in a contact plane extending in a longitudinal direction of the line and which can be taken apart to provide access to an interior surface of the line section, wherein sealing means extending. Sealing means, such as, for example, rubber strips, extend in the longitudinal direction of the line section and are arranged in or close to the contact plane to form a liquid barrier[[,]] ~~and wherein the~~. The two line parts have a clamping member that is able to engage on a locking element for fixing the line parts in a position in contact with one another.
